SafeNet®

Long Lasting Insecticidal Net

SafeNet®
Protects people
from Malaria

PRODUCT OVERVIEW

SafeNet® is an innovative product used for the prevention of malaria and other vector borne diseases.

Malaria poses a huge threat to thousands of individuals living in endemic countries the majority of which are located in Sub-Saharan Africa.

Our mission is to contribute eradicate Malaria burden with the use of a very cost-effective product, the SafeNet®.

The product is the result of several years of research and development made by a specially selected team of experts from the textile and chemical industries, which combining their extensive expertise in their respective fields, were able to bring to the market a high quality, user-friendly extra-durable product.

Made of 100% polyester through a unique textile-finishing manufacturing process using state of the arte facilities, SafeNet® ensures superior protection, safety and guaranteed satisfaction to the end user.

QUALITY CONTROL

Mainpol GmbH has a long track record of successful commitment to achieving the highest European and international quality standards for all its product lines.

SafeNet® is manufactured with state of the art machinery and technology.

Mainpol GmbH has very strict quality assurance systems in place to assure strict adherence to all details involved in the production process, as well as quality control system which guarantees adequate quality of final product.

Our raw material suppliers undergo rigorous inspections and are carefully selected based on their performance on a monthly evaluation. We make sure all inputs are carefully analyzed before using them in our production process.

Samples of every production batch are sent to international certified laboratories for complete testing of the products quality. Additionally, every shipment of SafeNet® products includes a Certificate of analysis (COA).
